Application letter

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Full Stack Developer position within your organization. With more than six years of experience designing, architecting, and deploying scalable enterprise-grade applications, I bring advanced expertise in modern full-stack engineering, cloud-native infrastructure, distributed systems, and high-performance web technologies.

Over the years, I have built complex platforms using cutting-edge technologies including Next.js 15+, React, TypeScript, Node.js, Laravel, PostgreSQL, MongoDB, Redis, Supabase, Docker, Kubernetes, and modern CI/CD ecosystems. My engineering focus has consistently centered on building resilient, secure, and scalable applications capable of supporting large-scale business operations, real-time systems, and data-intensive workflows.

In my most recent role as a Full Stack Engineer at Allneeda.com, I architected and developed SSR-based applications using Next.js App Router, React Server Components (RSC), Server Actions, and Edge Runtime optimizations. I implemented scalable backend services using Node.js, Express, and event-driven microservices architecture while integrating JWT authentication, OAuth2, RBAC authorization models, and row-level security policies for secure multi-tenant systems.

My frontend expertise includes advanced state management with Zustand and Redux Toolkit, real-time UI synchronization using WebSockets and Supabase subscriptions, and highly optimized user experiences using lazy loading, code splitting, streaming SSR, React Suspense, and dynamic rendering strategies. I have also built interactive analytics dashboards using Chart.js and D3.js while optimizing Core Web Vitals and frontend rendering performance.

On the backend and infrastructure side, I have extensive experience designing scalable API ecosystems, distributed caching layers, and asynchronous processing systems using Redis Pub/Sub, queue workers, and event-driven architectures. I have implemented secure RESTful APIs, webhook systems, and real-time communication pipelines while ensuring high availability and low-latency performance.

I also specialize in cloud and DevOps engineering, working extensively with Docker, Kubernetes, Nginx, AWS ECS Fargate, GitHub Actions, Cloudflare CDN, and automated CI/CD pipelines. My deployment workflows include blue-green deployment strategies, zero-downtime releases, automated testing pipelines, infrastructure optimization, and production monitoring.

What excites me most about this opportunity is the chance to contribute my expertise in modern web architecture, distributed systems, cloud-native technologies, and high-performance engineering to a forward-thinking organization focused on innovation and digital transformation.

I would welcome the opportunity to further discuss how my experience, technical leadership, and passion for engineering excellence can contribute to your team's continued success.

Thank you for your time and consideration. I look forward to speaking with you.

Sincerely,

Liaqat Paindah

PROFESSIONAL SUMMARY:

Senior Full Stack Developer with 6+ years of experience designing, architecting, and delivering scalable, enterprise-grade web applications and distributed systems. Specialized in modern JavaScript ecosystems, cloud-native infrastructure, secure API architectures, and high-performance SSR platforms. Proven expertise in Next.js, React, Node.js, Laravel, PostgreSQL, MongoDB, Redis, and real-time event-driven systems. Experienced in building resilient, maintainable, and secure applications that support complex business operations, analytics, and geospatial intelligence. Strong background in microservices architecture, DevOps automation, CI/CD pipelines, performance optimization, and security hardening. Passionate about clean architecture, scalable engineering practices, system reliability, and mentoring development teams to deliver high-quality software solutions.

CORE TECHNICAL SKILLS

Frontend Engineering

- React.js, Next.js (App Router), Vue.js, Nuxt.js
- TypeScript, JavaScript (ES6+)
- Tailwind CSS, Bootstrap
- Zustand, Redux
- Chart.js, D3.js
- SSR, ISR, SPA Architecture
- Web Performance Optimization

Backend & API Development

- Node.js, Express.js
- Laravel, PHP
- RESTful APIs
- Microservices Architecture
- Event-Driven Systems (EDA)
- WebSockets & Real-Time Systems
- Authentication & Authorization

Database & Infrastructure

- PostgreSQL, MySQL, MongoDB
- Redis, Supabase

- Query Optimization & Indexing
- Docker, Kubernetes
- AWS ECS, DigitalOcean
- Nginx, Cloudflare
- GitHub Actions & CI/CD Pipelines

Security & DevOps

- JWT Authentication
- OAuth2 & RBAC
- Row-Level Security (RLS)
- XSS / CSRF Protection

Additional Expertise

- Google APIs
- Geospatial Systems
- Agile Development
- System Design
- Technical Leadership & Mentorship

PROFESSIONAL EXPERIENCE

Full Stack Engineer

Allneeda.com – Remote USA | May 2025 – February 15, 2026

- Architected and deployed scalable web applications using Next.js 15+ with App Router, implementing Server-Side Rendering (SSR) and Incremental Static Regeneration (ISR), achieving Core Web Vitals scores >95 and reducing Largest Contentful Paint (LCP).
- Engineered high-performance RESTful APIs using Node.js and Express, integrating JWT-based authentication, OAuth2 flows, and Role-Based Access Control (RBAC) policies to secure endpoints and manage multi-tenant data isolation.
- Integrated Supabase for real-time subscriptions and row-level security, implementing real-time dashboards with WebSocket connections for live data visualization.
- Developed geospatial mapping systems using Google Maps APIs (Places, Geocoding, Distance Matrix), enabling radius-based search, polygon filtering, and address autocompletion with debounced API calls.
- Built responsive admin dashboards with Chart.js, visualizing KPIs and user analytics through WebGL-accelerated canvas rendering.
- Secured applications against XSS, CSRF, and SQL injection using Helmet.js, CORS policies, and parameterized queries, achieving zero critical vulnerabilities in OWASP ZAP scans.

Software Developer

MgtWell Consulting Services – Kabul, Afghanistan | February 2023 – Present

- Designed and developed interactive web applications using React, and Laravel, delivering user-friendly and scalable interfaces.
- Implemented API integrations, authentication, and payment gateways, ensuring secure and seamless data communication between front-end and back-end systems.

- Developed and optimized features leveraging Google APIs, including Google Maps, for location-based services and enhanced user experience in Android and iOS applications.
- Automated data pipelines and application workflows, connecting multiple sources (APIs, databases, cloud services) to improve performance and reliability.
- Ensured application scalability and performance optimization, applying clean coding practices, version control (Git), and debugging complex issues.
- Led testing, validation, and quality assurance efforts, identifying and resolving functional and security issues to maintain high standards across apps.
- Collaborated with cross-functional teams to deliver end-to-end solutions while mentoring junior developers and ensuring project deadlines were met.

System Developer

ARDHO – Kabul, Afghanistan | May 2024 – December 2024

- Designed micro services architecture using Laravel and Node.js, implementing Event-Driven Architecture (EDA) with Redis for asynchronous communication between services.
- Integrated third-party services including Clerk for user management and multi-factor authentication (MFA), Stripe for payment processing with webhook-driven subscription logic, and Uploadthing for secure, resumable file uploads with AWS S3 backup.
- Orchestrated containerized deployments using Docker Compose and AWS ECS Fargate, achieving zero-downtime deployments with blue-green deployment strategies.
- Optimized SSR applications using Next.js and Nuxt.js, implementing dynamic imports, image optimization, and CDN caching via Cloudflare.

Full Stack Developer

Gulnegar Co. – Kabul, Afghanistan | September 2021 – December 2022

- Developed SPAs and SSR applications using Vue 3 Composition API and Next.js, implementing code splitting via Webpack 5 module federation and dynamic route generation.
- Built monolithic and modular APIs with Laravel Eloquent ORM and Node.js Express, using Repository and Service patterns for business logic abstraction.
- Integrated third-party APIs for Resend for transactional and marketing emails, Twilio for SMS-based OTP and notifications, and Stripe Connect for marketplace payment routing.
- Optimized frontend performance using Core Web Vitals monitoring, lazy loading images with blur-up placeholders, and critical CSS inlining.
- Implemented Git workflows with branch protection rules, semantic commit messages, and automated CHANGELOG generation using Conventional Commits.

Full Stack Developer

Tawangaran Co. – Kabul, Afghanistan | July 2017 – July 2020

- Designed and implemented RESTful API services for system integration and data handling.
- Developed responsive user interfaces using HTML5, CSS3, JavaScript, and Tailwind CSS, ensuring accessibility and mobile-first design.

- Enhanced website performance by optimizing JavaScript, images, and leveraging lazy loading for faster page load times.
- Collaborated closely with UI/UX designers to translate wireframes and mockups into functional web applications.
- Ensured security best practices, such as SQL Injection prevention, XSS protection, and HTTPS encryption, were implemented across all web applications.
- Delivered user training on website management and maintenance, including CMS setups and e-commerce platforms.

EDUCATION

Bachelor of Information Technology
Kabul Education University – Kabul, Afghanistan | 2015 – 2018

LANGUAGES

- English: Fluent
